ABSTRACTED-PUB-NO: WO2005016106A

BASIC-ABSTRACT:

NOVELTY - Vacuum cleaner comprises a housing and an exhaust opening for an exhaust flow connected to the pressurized side of a motor/fan arrangement (27) via a flow channel to divide the exhaust flow into a first partial channel (33) and a second partial channel. The first partial channel and the second partial

channel are arranged in front of the exhaust opening.

DETAILED DESCRIPTION - Preferred Features: The second partial channel is connected to the first partial channel on the downstream side. The second partial channel forms a secondary flow channel which opens into the first partial channel forming a main flow channel.

USE - Vacuum cleaner.

ADVANTAGE - Noise is reduction during operation of the vacuum cleaner without using additional complex baffle devices.

DESCRIPTION OF DRAWING(S) - The drawing shows a cross-section through the vacuum cleaner.
